Table of Contents

- 1 Motivation
- 2 Theory
- 3 Testing
- 4 Conclusion

Title

To use this template, you can copy and just edit/add slides!

This is because all of the color customization occurs in the "Customize Themes" section in lines 12-51 of the code

The remainder of these slides serve as an example to show all the features you can use: bullets, buttons, sections, etc.

This was a labor of love, I hope you like it!

Another Title

and a subtitle!

Look at the code of this slide to see how columns made this formatting look nice.

Left Footer

Middle Footer

Yet another title

You can use bullets too:

- Like this one
- & this one

A title

- You can also nest sub-bullets
 - Sub-bullet 1
 - Sub-bullet 2
 - Sub-bullet 3
 - Sub-bullet 4

You can add citations¹ too

Below is a button that links to a slide in the appendix

▶ Go to graphs

¹Tjøstheim, Otneim, and Støve 2018.

The Test Statistic

Here is a made up equation:

$$\hat{A} = \bar{m} - \hat{m}_S$$

Notice how these buttons are centered and evenly spread out:

▶ Go to Terms

▶ Go to Definitions

▶ Go to Theorems

No way, another title!

- 1 Instead of bullets, you can index by number too
- 2 like this

Second to last title

Block Title

Block 1

Example Block Title

Block 2

Alert Block Title

Block 3

Block without a title

Last title

Last bit of text

Questions?

Tjøstheim, Dag, Håkon Otneim, and Bård Støve (2018). "Statistical dependence: Beyond Pearson's ρ ". In: *Statistical Science* 37.1, pp. 90–109. DOI: 10.1214/21-STS823. URL: <https://doi.org/10.1214/21-STS823>.

Appendix - A figure

Return to presentation

Some Estimators:

- Drift: $\hat{\delta}$
- Boundary: $\hat{b}(t)$

Some Variables:

- \hat{V}
- \hat{m}_S
- \bar{m}
- $m_J(\tau)$
